

## Measuring Your Pet For A Collar Or Harness

- \* Use a cloth measuring tape or a string. (If you use a string, mark the measurement on the string and compare it to a ruler for accuracy).
- \* You want the tape or string snug, but not tight.
- \* Measure the dog, not the fur. If the dog has thick fur, dig through their hair to find the proper reference points.
- \* Take the measurements three times. The results will vary slightly, but there should not be large discrepancies, or you can assume you're not measuring correctly. Submit an average of the three measurements.
- \* The dog must be standing squarely on all fours, with their back straight.
- \* Have someone help you hold the dog while you measure.
